PLEXIGLAS®

Train Safe, a display-case system fully compatible with model railroads

Products

The base, for tracks up to HO gauge, is of PLEXIGLAS® GS Clear 0F00 of thickness 5.0 mm, and the hood is of PLEXIGLAS® XT Clear of thickness 2.0 mm.

Fabricator

HLS Berg GmbH & Co.Kg, Freudenberg, Germany
www.train-safe.de

Selection criteria

- Visually appealing
- High light transmittance
- Very good surface quality
- Best processing options

Description of the application

TRAIN-SAFE, a product that revolutionized the world of model railroads in the early 1990s, is a display-case solution for entire model railroad trains that is made entirely of PLEXIGLAS®. Its integrated track system allows users to drive trains from their display cases directly on to the model railroad layout.

With its Train-Safe, HLS Berg is now the market leader in the segment of display-case systems for model railroads.

HLS Berg's area of expertise is the fabrication of curved PLEXIGLAS® U-profiles up to 3 m in length and in various dimensions. All of the machinery for PLEXIGLAS® forming was developed and constructed entirely in-house.
