Description of application

PLEXIGLAS® GS block material Clear in 40mm thickness is the ideal plastic for manufacturing lighting fixtures with an excellent appearance and outstanding transparency.

The Alteme lighting fixture is routed in one piece out of 40mm thick block material and then polished. This lighting fixture is always installed as a ceiling lamp. The corresponding light sources are installed according to the customer's wishes.

The Alteme lighting fixture is used all over the world, mainly in public buildings such as hospitals, government buildings and banks.
