Stapelbroek GmbH – Hotel renovations

Fabricator:
Hasenkopf
Holz und Kunststoff GmbH & Co. KG

Selection criteria

Material with high brilliance, homogeneously formable, very good fabrication properties and high surface resistance; large sheets and various colors available.

Description of application

Well-known companies that supply their products and services to the hotel sector are presented at the Hotel Competence Center in Oberschleißheim in the form of a permanent hotel exhibition.

Evonik equips several rooms with a selection of different PLEXIGLAS® and PARAPAN® materials in order to present the huge variety of applications offered by PLEXIGLAS®.

In Room No. 8, the furniture was made from high-gloss white PARAPAN®. The worktops are made of PLEXIGLAS® Optical HC sheets printed with a blackwood pattern. The high-gloss acrylic sheets have a scratch-resistant, hard-wearing surface, so that the usual high number of guests at hotels has no effect on the material. At the same time, it gives the room a high-class and modern appearance. The light source is a backlit sheet of white PLEXIGLAS® Satinice, whose homogeneous and ideal light diffusion simulates the incidence of daylight.
