Selection criteria

PLEXIGLAS® GS Clear 0F00 of thickness 12 mm was chosen to highlight the elegant technical design of the iPad without visual “competition.”

Description of the application

This application was specially developed by Schäfer Kunststofftechnik GmbH because Apple iPads are used for production control at many workplaces in Evonik’s production facilities.

All iPad supports for industrial use have so far been purely functional, with little regard for design. The Schäfer holder was intended to highlight the iPad as the central information point in the workplace without packing it into a “box” and to use it as a touchscreen as required.
