Designer

Boos & Schulz Designagentur
www.bsd-agentur.de

Selection criteria

- Excellent optical and light-guiding properties
- Excellent thermoformability of the material

Description of application

- Highly innovative lighting concept for a decorative and functional ceiling light that works on the principle of “less lamp, more light.”
- Suspended squiggles of light provide functional illumination by means of high-performance LEDs and skillfully fabricated acrylic. The lighting engineering elements fade into the background.
- Ergonomic lighting properties: very soft shadows, diffuse lighting across the surface and absolutely glare-free illumination
- Since the luminaire is laser-engraved, the light squiggles can be customized and adapted at short notice. Even customer logos can be incorporated, without additional tooling costs, and with minimum effort.
- Customization concept is unique in the designer lighting market.
- Dimmable by remote control, control panel or app.
