Selection criteria

- Absolutely homogenous illumination
- Excellent optical and light-guiding properties

Description of application

The "Versura" luminaire is a composite product consisting of a cover sheet, a light guide sheet and a reflective sheet.

- Indirect, glare-free corner lighting
- High-quality appearance in every lighting situation
- "Versura" brings a play of light to every corner thanks to multi-dimensional control (separate light sources and light colors), with innumerable lighting variants.
- Even when it is switched off, "Versura" looks like a wall sculpture, with routed lines that structure its surface.
- Control options include a remote control, a control panel or a smartphone app.
- Different material surfaces are available for an individual touch.
- A simplified version of "Versura" can be provided without "light lines", with additional flat modules to create a horizontal puzzle.
