Lighting design

Lumen 3
Entenbachstr. 25
81541 Munich, Germany

Selection criteria

- High light transmission
- Excellent formability and processability
- Very good optical and light-guiding properties

Description of the application

The first redevelopment phase of the Bahnhofstrasse in Böblingen now appears in a new light. As a connecting link between the railway station and the Altstadt (Old Town), the Neue Meile will in the future support the public spaces of the Unterstadt (Lower Town). In the pedestrian zone, the suspended light rings, which will glow in color for special occasions, create a distinctive atmosphere. In the run-up to Christmas, the light rings and the illuminations on the linden trees in the Bahnhofstrasse will set the right tone for the festive season.
