Description of application

This room thermostat provides a powerful, convenient way of controlling the temperature in a room.

Its superior design—flat housing and an LCD—are two of its features—is impressive in its own right. The LCD shows the time, room conditions, and the current status of the HVAC system. Four different models give customers the flexibility they need to adapt the unit to individual circumstances and integrate it into the building management system (BMS). The thermostat can be operated on site or configured through the BMS control center—either way, controlling room parameters is simple and precise.

The innovative character of this room thermostat is underscored by its sophisticated materials and excellent design: the high-quality, brilliant PLEXIGLAS® screen in precise, four-color printing is made of PLEXIGLAS® Optical HC, with chamfered edges that have been polished to a high gloss.
