- Joint-free corner elements
- Invisibly fastened by bonding

Fabricator

Ing. Hans Drascher Ges. m. b. H., Vienna

Architect

SP.B Ster Planungs-und Bauges. m.b.H, Vienna

Description of the application

A typical block in an ordinary city: parking spaces, factory units and industrial buildings, and small refreshing green spaces. Green spaces? The most striking of these has to be the corner of the young people's workshop in Lieblgasse, whose bright green façade brightens up the prefabricated concrete building, and lends character to its surroundings. As well as offering a lively contrast between matte concrete and a high-gloss surface, the invisible fastening of the façade elements, the flush installation of the windows and the use of joint-free corner elements really make the homogenous and fresh-faced design stand out.
